How to Read the Tide Calendar

The first letter describes a Low or High Tide.

This is the Month & Day
January 11th

01-11		01-12	
L0108	-0.1	L0159	-0.1
H0703	1.0	H0753	1.0
L1346	0.3	L1435	0.3
H1901	0.9	H1950	0.9

Time is listed in 24hr military time in hours then minutes. Subtract 12 hours from times above 13:00 to get time in PM. In this example...
 $19:01 - 12:00 = 7:01 \text{ pm}$

This is in feet for the tide being higher or lower than normal. In this example the last high tide will be 0.9 ft. higher than normal.
